APPLIED MATERIALS, INC. 2881 SCOTT BLVD. M/S 2061 SANTA CLARA, CA 95050			EXAMINER LEE, HSIEN MING	
			ART UNIT 2823	PAPER NUMBER

DATE MAILED: 12/03/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/905,053	Applicant(s) YU ET AL.	
	Examiner Hsien-Ming Lee	Art Unit 2823	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 September 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,2,4-6 and 10-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,2,4-6 and 10-23 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. §§ 119 and 120

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 13) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.
a) ☐ The translation of the foreign language provisional application has been received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

DETAILED ACTION

Remarks

1. Claims 1, 2, 4-6 and 10-23 are pending in the application.
2. The 102(e) rejection is withdrawn.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-2, 4-6 and 10-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kelkar et al. (US 6,489,254) in view of applicant's admitted prior art (hereinafter referred as "AAPA").

In re claims 1-2, 6, 10, 13, Kelkar et al. teach the claimed deposition method capable of filling recesses in a substrate, comprising:

- providing a substrate 12 having recesses 16 between polysilicon gate 14 defining side walls and recess bottoms (Fig. 1);
- exposing the substrate 12 to an energized deposition gas comprising a first component comprising O₃ (i.e. ozone) and a second component comprising TEOS to deposit a first layer of a material 20 (undoped silicon oxide) in the recesses 16 (Fig. 2) at different rates over the side walls and recess bottoms, i.e. by utilizing a *high ozone ratio* for depositing the first layer 20, it would achieve a high surface mobility

causing the first layer to despit at recess bottom faster than on the sidewalls due to the flow-like characteristic (col.4, lines 4-16); and

- reducing the ratio of the first component O₃ to the second component TEOS (i.e. using *low ozone ratio*, col.4, lines 14-28) to deposit a second layer of the material 30 (doped silicon oxide, BPSG) over the first layer 20 (Fig.3).

Kelkar does teach that the second layer of the material 30 (doped silicon oxide, BPSG) is deposited over the first layer 20 but does not expressly teach that the second layer 30 is in the recess.

However, Kelkar does suggest the desirability of the teachings on **solving the problem of incomplete gap filling** (col. 1, lines 47-50 and col. 2, lines 56-59); and further indicates that **both** the first layer of high-ozone dielectric layer 20 **and** the second layer of low-ozone dielectric layer 30 are deposited to adequately fill the gap between small or narrow lines (col. 2, line 65 through col. 3, line 4).

Therefore, it would have been obvious to one of the ordinary skill in the art, at the time the invention was made, to recognize that the teachings of Kelkar can be also apply to the situation where the first layer 20 is not completely fill the recess and the second layer 30 can be therefore completely fill the recess, since Kelkar suggest the desirability of doing so (col. 2, line 65 through col. 3, line 4).

In re claims 4 and 14, Kelkar et al. also teach that the reducing step is performed by reducing the flow rate of O₃ *from* between about 120g/m³ and about 140g/m³ (col.3, lines 64-65) *to* between about 70 g/m³ and about 100 g/m³ (col. 4, lines 26-28).

In re claim 18, Kelkar et al. also teach depositing the first layer 20 to a sufficient thickness to fill the reentrant cavities 16 as shown in Fig.2.

In re claims 5, 15 and 22, the selection of the time for the ratio-reducing step is obvious because it is a matter of determining optimum process condition by routine experimentation with a limited number of species. In re Jones, 162 USPQ 224 (CCPA 1955)(the selection of optimum ranges within prior art general conditions is obvious) and In re Boesch, 205 USPQ 215 (CCPA 1980)(discovery of optimum value of result effective variable in a known process is obvious). For example, the time for the ratio-reducing step depends on the aspect ratio of the recess, i.e. the higher aspect ratio the longer the time it becomes. In such situation, the applicant must show that the claimed time is critical, generally by showing that the claimed range achieves unexpected results relative to the prior art range. See M.P.E.P. 2144.05 III.

In re claims 12, 19 and 23, the selection of the thickness of the first silicon oxide layer is obvious because it is a matter of determining optimum process condition by routine experimentation with a limited number of species. In re Jones, 162 USPQ 224 (CCPA 1955)(the selection of optimum ranges within prior art general conditions is obvious) and In re Boesch, 205 USPQ 215 (CCPA 1980)(discovery of optimum value of result effective variable in a known process is obvious). For example, the thickness of the first silicon oxide may be optimized to a desired range so that the first silicon oxide is thick enough to substantially fill the bottom of the recess while still keeps the recess open. The open-recess is then filled with the second silicon oxide layer, which, in turn, would avoid the formation of voids in the recess. In such situation, the applicant must show that the claimed thickness range is critical, generally by showing that

Art Unit: 2823

the claimed range achieves unexpected results relative to the prior art range. See M.P.E.P.

2144.05 III.

In re claims 11, 16 and 20, Kelkar et al. fail to teach the recesses have sidewall portions covered with silicon nitride spacers, and the silicon nitride spacers, the polysilicon gates and the other portions of the substrate are covered with a silicon nitride liner.

However, it would have been obvious to one of the ordinary skill in the art, at the time the invention was made, to appreciate that the teachings of Kelkar et al. is an illustrative example rather than restrictive; and obvious variations can be made without departing from the spirit and scope of the teachings of Kelkar et al (col.4, lines 60-67). For example, one of the ordinary skill in the art would have been motivated to apply the teachings of Kelkar et al to any situations that needs to fill the recess having a high aspect ratio as shown in AAPA.

In Fig. 1, AAPA teaches a structure having the recesses 27 being between polysilicon gates 22 and having sidewall portions covered with silicon nitride spacers 24, and wherein the silicon nitride spacers 24, the polysilicon gates 22 and the other portions of the substrate are covered with a silicon nitride liner 26; and the recesses 27 are filled with the silicon oxide 28.

Therefore, it would have been obvious to one of the ordinary skill in the art, at the time the invention was made, to apply the teachings of Kelkar et al. to the AAPA's structure with a reasonable expectation of success because it would achieve same results, i.e. capable of filling high-aspect-ratio recesses without having voids.

In re claim 17, Kelkar et al. in view of AAPA teach that the silicon nitride liner 26 comprises reentrant cavities as shown in Fig.1 of AAPA; and the reentrant cavities are smoothened by the first silicon oxide layer of Kelkar et al.

In re claim 21, Kelkar et al. in view of AAPA teach that the ratio-reducing step is performed by reducing the flow rate of O_3 , as stated above.

Response to Arguments

5. Applicant's arguments have been fully considered but they are not persuasive for the reasons as follow.

Applicant's argument is on the ground that Kelkar does not teach or suggest utilizing a second deposited layer to complete filling of a gap or recess that has remained incompletely filled following an initial deposition stage.

Contrary to the arguments, Kelkar does suggest the desirability of doing so because Kelkar in col. 2, line 65 through col. 3, line 4 indicates that two dielectric layers (i.e. 20 and 30 as shown in Fig. 3) provide an ability to adequately filling the gap or recess between narrow features to solve the problems of voids 60 in the gap as shown in Fig. 5.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hsien-Ming Lee whose telephone number is 703-305-7341. The examiner can normally be reached on M-F (9:00 ~ 5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Olik Chaudhuri can be reached on 703-306-2794. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-7382 for regular communications and 703-308-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
